Significant Events

No significant events for this reporting period

Field Operations

No Ops Log entries for this reporting period

Exercises

No exercises for this reporting period

Flash Flooding in Texas, Oklahoma and Arkansas: Severe thunderstorms are expected through Wednesday. The storms will bring heavy rainfall, flash flooding and the possibility of tornados. No requests for federal assistance have been made at this time.

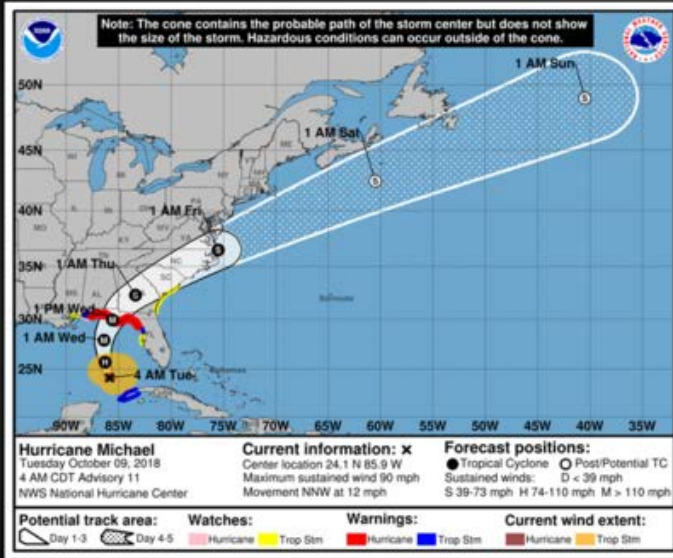

Craft - Turney DW Incident: The TCEQ reported that five of the samples collected to date showed the presence of Chlorothalonil (a constituent of the fungicide). The Flushing Plan continues on all potentially affected distribution lines. The EPA Houston lab continues work on establishing a test method for MBT.

Hurricane Michael Update: EPA participated on the State of Louisiana Coordination Call on 8 October. Hurricane Michael continues on a NNE track and is expected to make landfall in Florida panhandle. Limited impacts to Louisiana mainly in the form of higher than normal tides. All Parish and State offices are at normal operations but closely monitoring the current track. There are no more Coordination calls planned.

Hurricane Michael

Michael continues to move towards the northern Gulf

Weather Forecast Office
New Orleans/Baton Rouge
Issued October 9, 2018 4:51 AM CDT

Situation Overview:

Hurricane Michael has maintained its intensity since the last advisory as it moves northward towards the Gulf Coast. The system is expected to impact the northeastern Gulf coast region this evening through early Thursday. Tropical Storm Watches are in effect for portions of the Mississippi Gulf Coast.

Impacts and Safety:

- Greatest impacts are still expected to be east of the local area
- Higher than normal tides are expected through tonight along the LA and MS coasts due to strengthening onshore winds. A Coastal Flood Advisory is in effect.
- If the track shifts west or if any bands affect the local area, heavy rain and strong gusty winds will also be possible
